PROFESSIONAL SUMMARY

Entry-level **SOC Analyst / Security Analyst** with hands-on experience in **SOC monitoring, incident detection, threat hunting, and SIEM operations** through a real-world **SOC home lab**. Skilled in **Splunk, Wazuh, MITRE ATT&CK, log analysis, and incident response workflows**. Discovered **20+ real-world vulnerabilities** including **IDOR, XSS, and LLM prompt injection leading to XSS**. Brings over **2 years of secure application development experience** focused on **application security, vulnerability assessments, regulatory compliance**, and **faster remediation through collaboration with engineering teams**.

CORE TECHNICAL SKILLS

Security Operations Center (SOC) Monitoring, Incident Detection, Triage & Escalation, Threat Hunting, IOC Enrichment, SIEM Tools (Splunk, Wazuh), Log Analysis, Event Correlation, Alert Investigation & False Positive Reduction, Security Playbooks & Runbooks, MITRE ATT&CK Framework, Kill Chain Analysis, Network Traffic Analysis (Wireshark), TCP/IP, DNS, HTTP/HTTPS Fundamentals, Endpoint Detection & Response (EDR), Microsoft Defender, CrowdStrike Falcon, Vulnerability Assessment, Web Application Security Testing, OWASP Top 10, Bug Bounty Methodologies, Security Automation (Python, Bash)

SECURITY PROJECTS

SOC Analyst Home Lab

- Built a **VMware-based SOC lab** simulating attacker and defender environments using **Kali Linux** and **Metasploitable 3**.
- Configured **Splunk and Wazuh SIEM** for centralized log collection, correlation rules, dashboards, and alerts.
- Simulated **10+ MITRE ATT&CK techniques**, including reconnaissance, privilege escalation, lateral movement, and exfiltration.
- Conducted **network traffic analysis** using **Wireshark** to identify malicious activity.
- Created **incident response reports and playbooks** aligned with SOC workflows.

Bug Bounty & Vulnerability Research

- Identified **20+ security vulnerabilities** across web applications.
- Discovered **IDOR vulnerabilities** leading to unauthorized access.
- Found **reflected and stored XSS vulnerabilities** affecting user sessions.
- Identified **LLM prompt injection vulnerabilities resulting in XSS**, highlighting emerging AI security risks.
- Documented findings with clear impact analysis and remediation guidance.

PROFESSIONAL EXPERIENCE

Junior Full Stack Developer | Simple Accounts – Data Innovations and Technology | Sep 2023 – Oct 2025

- Developed secure web applications with emphasis on **application security and secure coding practices**.
- Implemented **JWT authentication and access controls**, reducing vulnerabilities by **35%**.
- Supported **log analysis, monitoring, and vulnerability remediation** in collaboration with security teams.
- Contributed to **ZATCA Phase 2 (Saudi Arabia) e-invoicing compliance**, meeting regulatory security requirements.

Process Executive – Finance & Accounts – Infosys BPM | Feb 2022 – Aug 2023

- Investigated **100+ anomalies** through detailed analysis, ensuring **100% compliance**.
- Automated validation and reporting processes, reducing audit preparation time by **30%**.

APPLICATION SECURITY & ENGINEERING SKILLS

Java, Spring Boot, ReactJS, PostgreSQL, Docker (used for secure development, logging, API security testing, and vulnerability remediation)

EDUCATION & CERTIFICATION

- MBA – Artificial Intelligence & Machine Learning (Online) | D.Y. Patil College of Technology, Pune | 2024–Present
- Bachelor of Commerce | Pune University | 2017–2020
- CompTIA Security+ – Planned
